

Malawi Telecom Performance Dashboard

### Dashboard Interpretations & Insights

#### Key Performance Indicators (KPIs) Overview

This dashboard provides a comprehensive view of Malawi's telecommunications market performance across multiple operators. The top row displays critical aggregate KPIs:

- Total Subscribers:** Represents the overall market size and penetration. Monitor for growth trends and market saturation.
- Total Revenue (MWK Millions):** The combined revenue generated across all operators. Compare against historical periods to identify revenue growth or decline.
- Average ARPU (MWK):** Average Revenue Per User indicates monetization efficiency. Higher ARPU suggests better value extraction per customer.
- Average Churn Rate (%):** Measures customer retention. Lower churn indicates better customer satisfaction and loyalty. Industry benchmark for telecom is typically 1-3% monthly.
- Average NPS Score:** Net Promoter Score reflects customer willingness to recommend services. Scores above 50 are excellent; 0-30 indicates improvement needed.
- Average FCR (%):** First Call Resolution measures service quality. Higher FCR reduces operational costs and improves customer satisfaction.

#### Trend Analysis

The **Subscribers Trend** and **Revenue Trend** charts reveal temporal patterns:

- Look for seasonal variations or growth trajectories
- Identify which operators are gaining or losing market share
